Fire Science

The Fire Science course is designed to prepare students for entry-level firefighter positions. Students will learn through classroom and guided practice activities the essentials of fire suppression, which includes: fire department orientation and terminology, fire department history, understanding fire behavior, wearing personal protective clothing, identifying ropes, tying knots, using fire extinguishers, performing Forcible entry, carrying and raising ladders, operating self-contained breathing apparatus, employing search and rescue techniques, working

with ventilation tools and practicing hose evolutions on an operating fire engine all in a safety conscious environment. These skills along with leadership and communication skills will prepare the student for certification through employment opportunities with fire departments. Students must be in good physical condition to enroll in the course, as training will include climbing stairs and crawling and carrying additional equipment and supplies.

Students must submit a current physical and proof of insurance to the GAVC office before the first day of school to be considered enrolled in this program.

Students will receive articulated credit with ICC upon successfully completing the course.
